THE FLOOR SPECIALISTS

*Your Floor Leveling and Sound Control Experts
Since 1991*

Visit Us at www.floortechnologies.com

Committed to Responsive Service

Whether you design or build property, your business depends on the quick delivery of a quality product. Ours does too. With service that is fast, effective and responsive, Floor Technologies is a leading specialist in the floor underlayment and leveling market.

And while excellent service is very important to us, we don't stop there. Strong client relationships, an experienced team and quality materials by Maxxon, all make a difference. Add an unmatched scheduling ability as well, for projects ranging from custom homes to large developments. It's how we've earned our reputation for excellence since 1991, one customer at a time.

- **Two production managers ensure personal attention to your project or community.**
- **Four dedicated crews working Monday through Saturday.**
- **Back-up equipment to sustain a complete crew.**
- **Install rate of 2,000 - 3,000 sq. ft. per hour.**

Committed to Exceptional Quality

We offer efficient service, without sacrificing on exceptional quality. And we use various measures to maintain high standards. Water meters ensure proper mix ratios, for example, while slump tests monitor the quality of poured underlayments on site. Frequent test cube samples are also taken and sent to a specialized lab for testing. Finally, we test moisture levels to determine when underlayments are ready for final flooring goods.

Having these steps as an integral part of our process means we can deliver the highest quality products possible.

- **Dedicated quality control manager with more than 20 years of floor-leveling experience.**
- **Moisture testing program at no additional cost.**
- **Test cube samples taken weekly and sent for lab evaluation.**

Products That Make a Difference

As an authorized applicator of Maxxon floor underlayments, we cover the full spectrum of products. This includes gypsum and Portland-based cementitious, self-leveling floor products. With superior compressive strength, exceptional fire resistance and unique sound-control systems, Maxxon products are the ideal choice for residential and commercial applications.

- **Maxxon products can handle light trades within two hours of pouring.**
- **Its non-combustible material provides a one-hour fire rating.**
- **A gypsum to gypsum application seals the perimeter of rooms.**
- **Prevents the intrusion of insects and other pests.**
- **Eliminates squeaking, nail pops and uneven joints associated with wood subfloors and Durarock.**
